Re: NDEP Class I Application Review
Toquop Energy Project

Attention Mr. Rod Moore and other addressees as referenced below:

This letter is to set forth citizen opposition to the proposed coal fired electric plant known as Toquop. We oppose the plant on the following grounds and the additional unanswered questions.

References are made as follows 1) Letter dated December 14, 2007 from United States Environmental Protection Agency (EPA) to Bureau of Land Management (BLM) 2) Letter dated September 12, 2007 from Virgin Valley Water District (VVWD), Mesquite, Nevada to Nevada Public Utilities Commission 3) Nevada Division of Environmental Quality, (NDEP) Class I Application Review of the emissions for Toquop Energy Project dated December 21, 2007.

As you are aware we have had two public meetings, November 7, 2007 conducted by the BLM and February 7, 2008 conducted by the NDEP. Together these meetings represent the total of the public comment period. Because of the structure of the permitting process we have yet to find the answers or receive answers to questions that we feel are important to the community and to what we feel are negative impacts on our environment.

Reference # 1) The EPA wrote comprehensive comments to the BLM regarding the draft EIS statement. We think many of these comments are important including the comment that the natural gas alternative is wrongly combined with the coal fired alternative. To us it appears that the applicant was trying to leverage the previous EIS which was made under the natural gas alternative. I quote the applicant as published March 1, 2008 in the St. George Spectrum: *Frank Maisano, spokesman for the Toquop Energy Project, said on Friday that Sithe Global was never considering natural gas, saying that some other company was considering a natural gas plant there at that site.* <http://www.thespectrum.com/apps/pbcs.dll/article?AID=/20080301/NEWS01/803010328&template=printart>. If Sithe Global has not ever considered natural gas, then why is it being allowed to incorporate the 2003 EIS record of decision? The EPA comments on more than 30 points of comment including a small comment for a "no build" alternative. We believe that given the negative impacts, NDEP should deny the air quality/pollution permit.

Reference # 2) The Nevada state water resources are a very complex issue but without exception I think we all agree the water is finite, it cannot be replaced and is beyond valuation. Please keep in mind this is the potable water, the drinking water for the city of Mesquite. In particular I direct your attention to the last page of this letter, *"The Project is located directly adjacent to Toquop Wash which is tributary to the Virgin River...The Project is located directly on top of the fault zone which is the potable water supply for the VVWD service area. The aquifer underlying the Project must be protected at all cost from the onsite waste disposal facility as this is the only current source of potable water utilized by VVWD. Waste water discharge must not be allowed as the Project is located over the potable water supply."* For the benefit of emphasis we repeat here that the project is located on an earthquake fault zone. We believe there is a deficiency in the plans providing for earthquake disaster and reinforcement to the emission stacks and the fuel storage tanks.

Reference #3) The application review refers to seven storage silos which will have from 4 to 10 day storage, the silos are to be emptied into trucks or railcars if there is a secondary market for the by-products, if not a pug mill is to be used. The mill will mix by products with 18% water and be trucked to the 150 acre on site land fill. The active area is said to not exceed 10 acres. We would like to remind NDEP that the BLM sold land as close as four miles for housing and development. We do not believe the open land fill is a safe storage for disposing this material with housing so close. The Nevada desert has high winds and high heat and we do not think the application review adequately provides for safe disposal of these by products.

The application review indicates there will be storage of more than 1,000,000 gallons of fuel including diesel fuel. The application states that the storage material is under a maximum vapor pressure less than 3.5 kPa and therefore is NOT subject to record keeping. It would seem that the mere storage of such a large amount of diesel fuel would be subject to record keeping. **Please advise who is responsible for monitoring this storage as to leakage, and why is it necessary to store such a large volume of diesel. It is emphasized here that we require an answer as to how the air pollution division of the state has the authority to exempt volatile, toxic material from record keeping and permitting.**

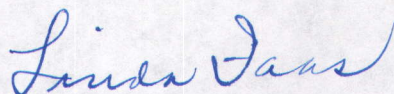

No authority has ever answered the following questions, what is the impact on the emergency resources of the city of Mesquite? Surely because of its location it would be the first responder in an emergency. Who is to pay for these services? Lincoln County has not approached Mesquite, or Clark County to offer to reimburse for costs. Among other emergency questions the application does not include hazard response plans. **Is it really the policy of the state to force city and county governments to grapple with emergency plans after an air quality permit would be issued?** No authority has ever answered the questions of access. While the BLM covered rights of way, the only access is via a truck stop and a passenger car underpass. The Nevada Department of Transportation has said no plans have been received nor has an application been submitted for an improvement to the road access. Who is to pay for construction and maintenance access? Surely the state does not intend to allow construction via the surface streets of the city of Mesquite. **Who has the ultimate overview of this project?**

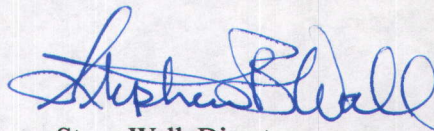

NDEP has indicated that a copy of the draft operating permit is available at the Mesquite Library. This is not true; the document available at the library is on the subject matter of Reid Gardner electric plant. The librarians have repeated that no other document has been made available. Further the presentation at the Mesquite City Hall on February 7, 2008 was very perfunctory, the crowd was given a brief slide show where one slide actually represented pollution as being a square grid. One person in the audience asked, "Does pollution really come in square grids?" NDEP repeatedly asked that the questions address scientific questions while the citizens are not scientists it is evident that NDEP never has questioned the modeling provided by the applicant. We believe it is the responsibility of the state agency and its scientists and engineers to question and test the accuracy of the evidence provided by the applicant. **The state is charged with the safety and welfare of its citizens and we here by request that the applicant be denied on the basis that public safety and welfare is not being protected.**

Sincerely,
Defend Our Desert

Re: NDEP Class I Application Review
Toquop Energy Project

Attention Mr. Rod Moore:

This letter is to forward the signatures of more than 329 people who are asking that the air quality pollution control permit for Toquop Energy Project be denied. We believe the cumulative effects of the pollution together with the risks of this heavy industry, including the storage of more than 1 million gallons of unregulated diesel are unsafe for Southern Nevada. The aquifer for our drinking water simply cannot be put at risk.

We are petitioning the Bureau of Air Pollution Control to deny the air quality permit based and the health and safety of the community.

Sincerely,

Michele Burkett
Defend Our Desert

Defend Our Desert, citizens group
PO Box 3683
Mesquite, NV 89024

March 5, 2008

Rod Moore
NV Division of Environmental Protection
Bureau of Air Pollution Control
901 South Stewart Street, Suite 4001
Carson City, NV 89701-5249

Fax 775-687-6396

Re: NDEP Class I Application Review
Toquop Energy Project

Attention Mr. Rod Moore:

This letter is to forward the signatures of more than 329 people who are asking that the air quality pollution control permit for Toquop Energy Project be denied. We believe the cumulative effects of the pollution together with the risks of this heavy industry, including the storage of more than 1 million gallons of unregulated diesel are unsafe for Southern Nevada. The aquifer for our drinking water simply cannot be put at risk.

We are petitioning the Bureau of Air Pollution Control to deny the air quality permit based and the health and safety of the community.

Sincerely,

Michele Burkett
Defend Our Desert

PO Box 3683

Re: NDEP Class I Application Review
Toquop Energy Project

Attention Mr. Rod Moore:

This letter is to forward the signatures of more than 132 people who are asking that the air quality pollution control permit for Toquop Energy Project be denied. We believe the cumulative effects of the pollution together with the risks of this heavy industry, including the storage of more than 1 million gallons of unregulated diesel are unsafe for Southern Nevada. The aquifer for our drinking water simply cannot be put at risk.

We are petitioning the Bureau of Air Pollution Control to deny the air quality permit based and the health and safety of the community.

Sincerely,

Michele Burkett
